

Johannes Leandro Laeber Justesen

Frontend Engineer · AI products, developer experience, motion

Måløy, Norway (open to relocation) · +47 45352243 · johannesjustensen99@gmail.com · linkedin.com/in/jjustesen

Danish and Brazilian citizen · Full EU/EEA work rights

SUMMARY

Frontend engineer with six years building production web applications in React, Next.js and TypeScript. Most recently the sole frontend engineer on an enterprise generative-AI platform, owning everything from the model playground to the streaming response layer. Comfortable across the stack and at the boundary with backend, cloud and hardware teams.

EXPERIENCE

Full Stack Developer · Evoy April 2026 – August 2026 · Florø, Norway

Evoy builds the world's most powerful electric propulsion systems for boats — 120 to 400+ hp, for hulls between 20 and 50 feet.

- Built and maintained the web and mobile applications in React and TypeScript that boat owners use to monitor and operate their systems.
- Worked on the AWS IoT integration carrying data off the motors, and on the API layer delivering it to the client.
- Worked across frontend, backend and IoT. In a company where half the product is hardware, features do not ship if you stop at the API contract.
- Contributed to the design and architecture of new features across Azure, AWS and GCP.

Senior Frontend Developer · Auramind.ai October 2024 – April 2026 · Remote, Brazil

Corporate generative-AI platform running on Amazon Bedrock in a BYOC architecture, deployed inside each client's own AWS account. Sole frontend engineer for a year and a half.

- Owned the entire frontend: architecture, component library, coding standards and every screen that shipped. There was no one else.
- Built and owned the AI Playground, where users switch between models (Claude, Llama, Amazon Nova, Titan) and tune parameters before putting an assistant into production — the surface that lets a legal or HR team configure AI without an engineer.
- Built the real-time streaming layer for model responses, so multi-second Bedrock calls render token by token instead of leaving users on a spinner.
- Shipped the interaction analytics views companies use to see how employees actually use AI.
- Delivered an interface that holds across isolated per-client deployments, each in a separate AWS environment.

Frontend Developer · Rhevolut June 2023 – October 2024 · Contract via Rsyst, Brazil

Antler-backed recruiting platform replacing the traditional job funnel with matchmaking between candidates and open roles.

- Built the frontend architecture and codebase for the matching platform in Next.js and TypeScript.
- Optimized performance and scalability as the user base grew.
- Worked directly with product and UX on the flows both candidates and recruiters move through.

Frontend Developer · CaffeeX Tecnologia April 2022 – June 2023 · Contract via Rsyst, Brazil

Contract management and coffee trading platform.

- Led frontend development, owning code quality, architecture and system optimization.
- Built and maintained the design system components the rest of the product was assembled from.
- Integrated WebSockets for real-time communication and moved data fetching to React Query, cutting redundant API calls.
- Set the coding standards the team worked to and mentored junior developers.

Frontend Developer (Mid-level) · BTG Pactual September 2021 – March 2022 · Rio de Janeiro, Brazil

The largest investment bank in Latin America.

- Built version 2.0 of the client-facing application: primary components and an architecture designed to be maintained and extended.
- Improved overall performance by refactoring the codebase and reworking the UI.
- Created a design system in Figma so the application stayed consistent as it grew.

Frontend Developer · Codengage — client: Sponte August 2020 – September 2021 · Paraná, Brazil

Sponte is a school management system used by more than 5,000 Brazilian schools, covering around 2 million students a year.

- Built design system components and new features in React, shipped into a system already running in production.
- Owned bug tracking and testing, where a regression reaches thousands of schools at once.
- Reviewed code and gave feedback to other developers.

Web Developer · Freelance July 2019 – July 2020 · Remote

- Built landing pages, interactive e-commerce features and custom components for client web applications, working directly with clients on scope and deadlines.

TECHNICAL SKILLS

Core React, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS

AI & real-time LLM playgrounds and model configuration UIs, response streaming, Amazon Bedrock, WebSockets, AWS IoT, REST

Motion & DX Framer Motion, GSAP, Storybook, design systems, SDK example apps

Testing Cypress, Jest, unit and integration testing

Backend & infra Node.js, Python, AWS, Azure, GCP, Supabase, PostgreSQL

Design Figma, Adobe XD, interaction and motion detail

EDUCATION

BSc, Software Engineering · Universidade Tecnológica Federal do Paraná (UTFPR) 2018 – 2022

- Winner, 1st UTFPR/DV Programming Marathon.

LANGUAGES

Portuguese (native) · English (professional working) · Norwegian (basic, learning)

BEFORE SOFTWARE

Two years shooting freelance in the Faroe Islands (2017–2018). Different craft, same instincts — composition, light, and knowing what to leave out. Portfolio available on request.
